SANDBANKS PROVINCIAL PARK BIRD CHECKLIST

Welcome to Sandbanks Provincial Park. This list includes 246 species of birds that have been seen at the park. Sandbanks comprises approximately 1700 hectares of land and water. Habitats include coniferous and deciduous forests, marsh, pannes, old and cultivated fields, three lakes and the Outlet River. These diverse habitats provide for a wide variety of birdlife.

This list was compiled from both park records and sightings provided by visitors. All attempts have been made to create an accurate list; however, new input is always important. Any records would be greatly appreciated, particularly of those species listed as rare or casual. Winter records are also important, as the park has few records of birds at this time of year. Please direct this information or any comments/questions you have about this checklist to the Park Naturalist. As more information is collected, many species may be found to be more numerous than previously recorded. Happy birding!

Codes Used In This Checklist

C - Common. Should be found in suitable habitat with little difficulty.

U - Uncommon. Present in suitable habitat, but in lesser numbers than above. May require a concentrated effort to locate.

R - Rare. Present most years, but in very low numbers. Often requires repeated visits to locate.

X - Casual. Three sightings or less.

Sp - Spring. The period when a species is migrating to its breeding area.

Su - Summer. The nesting period.

Fa - Fall. The period when a species is migrating to its wintering area.*

Wi - Winter. The over-wintering period.

Note: Seasons vary, depending on species. Spring starts for most waterfowl, for example, in March, but smaller birds do not usually migrate through until May. The fall season can be even more confusing, with many shorebirds returning south anytime in July, smaller birds (eg. warblers) wait until August or September, and waterfowl until October or even later.
